

Cleaning Office Equipment on-Site service

Spreads cold flu virus? - Lessen nose burden allergic sinus

During a tea break, I move around holding files and stuffs then back to my office desk front. I can't be bothered to munch some snack sweets filled in my mouth and continues on my fingers press on keyboard, devices and phones is a norm to me everyday! Till you realizing; Dirty keyboards and telephones spread accumulated germs that can cause illness in the workplace.

Stained dirt unsightly seen. - Do Care!

Daily uses of the office equipment are the worst offenders with the highest bacteria count. Computers leave finger oils, make-up, adhesives, food crumbs, and drink stains. The oily grime that collects becomes a breeding ground for bacteria, increasing the risk of colds, and other infections spreading through an office.

- + Internal cleaning and dust reduction

"Telephones have more germs than toilet seats"

A study, funded by The Clorox Co, analyzed more than 7,000 samples from personal workspaces and common areas in offices. The average desk harbours **400 times more bacteria than the average toilet seat**, according to the University of Arizona study.

"The premise of the study was to find the germiest place in the workplace," said Chuck Gerba, who headed the study. While the telephone had the highest level of bacteria, desks, fax machines, water fountain handles, microwave door handles and computer keyboards also had high levels, researchers found.- **Press Article**

preventative measures

Care to office equipment; extensive life-span; reduce problem!

The cooling fan draws in dust, dirt, lint, and hair into your PC, causing overheating and corrosion on circuit contacts. This can lead to:
